

How To Guide – ARDENS Wound Management Template for SystmOne

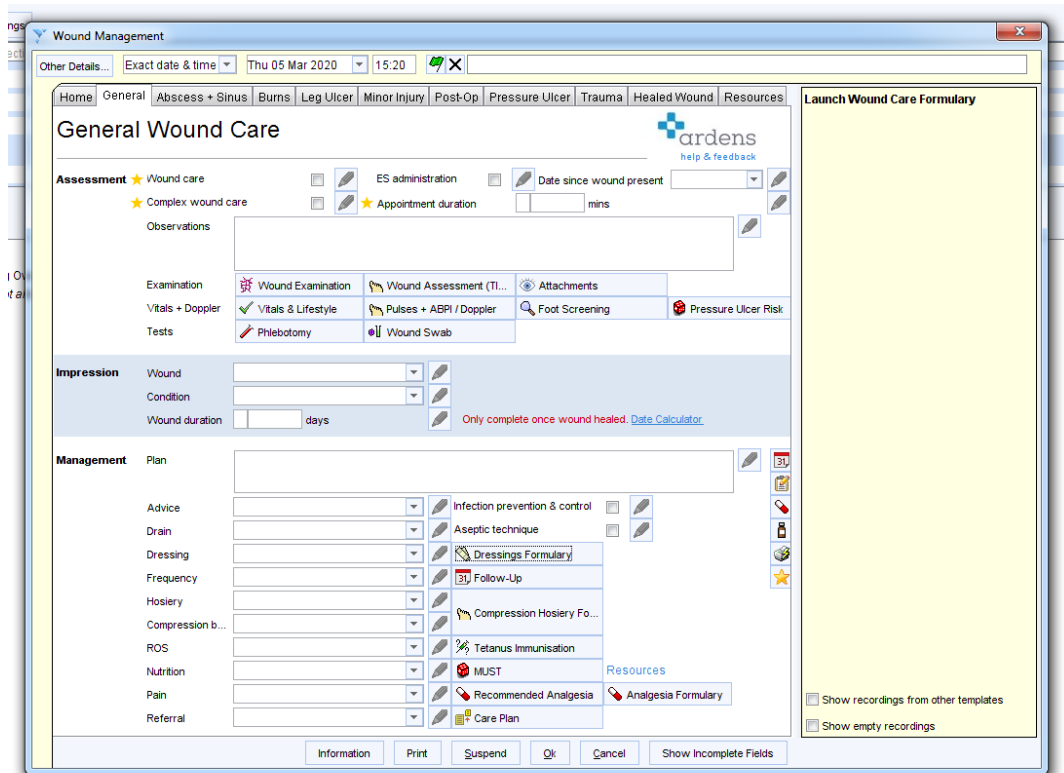

1. Click on auto-consultation and scroll down to ardens NURSES and HCAS – select wound management from the menu.

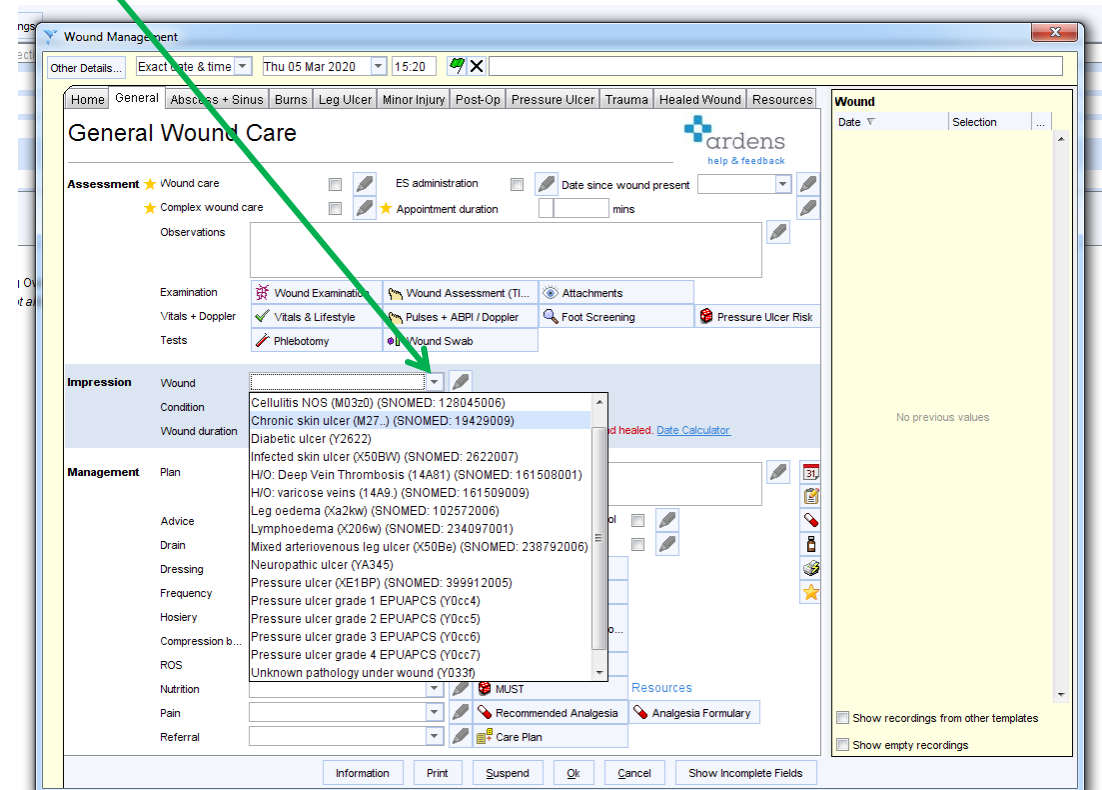

2. The following template will appear – it has various option tabs – you can select a specific one or use the general wound management template.

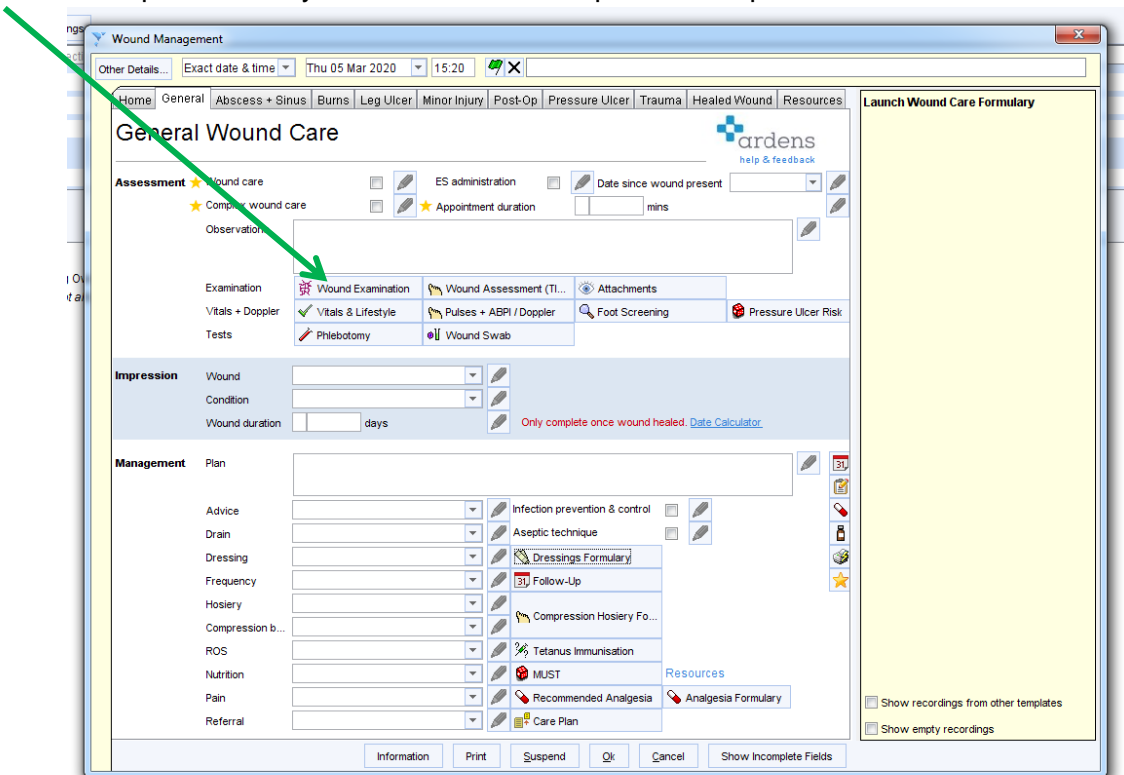

3. This is the general wound management template screen

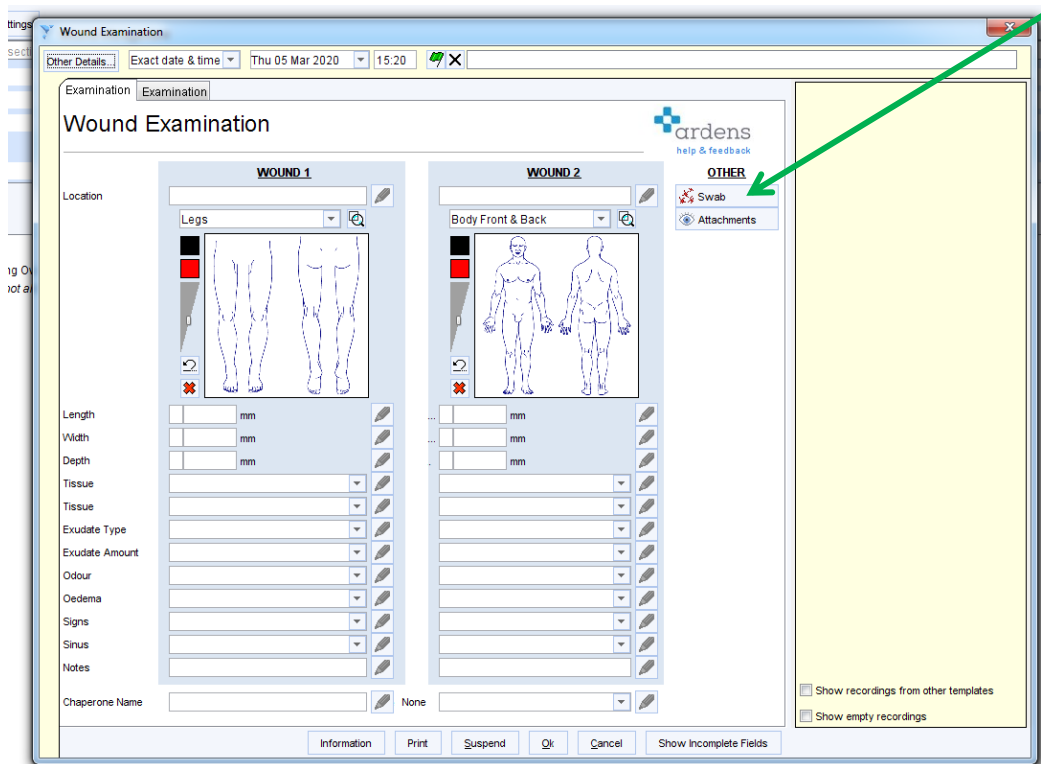

- Use the drop down menus for more detail – these will all code in the background for you.

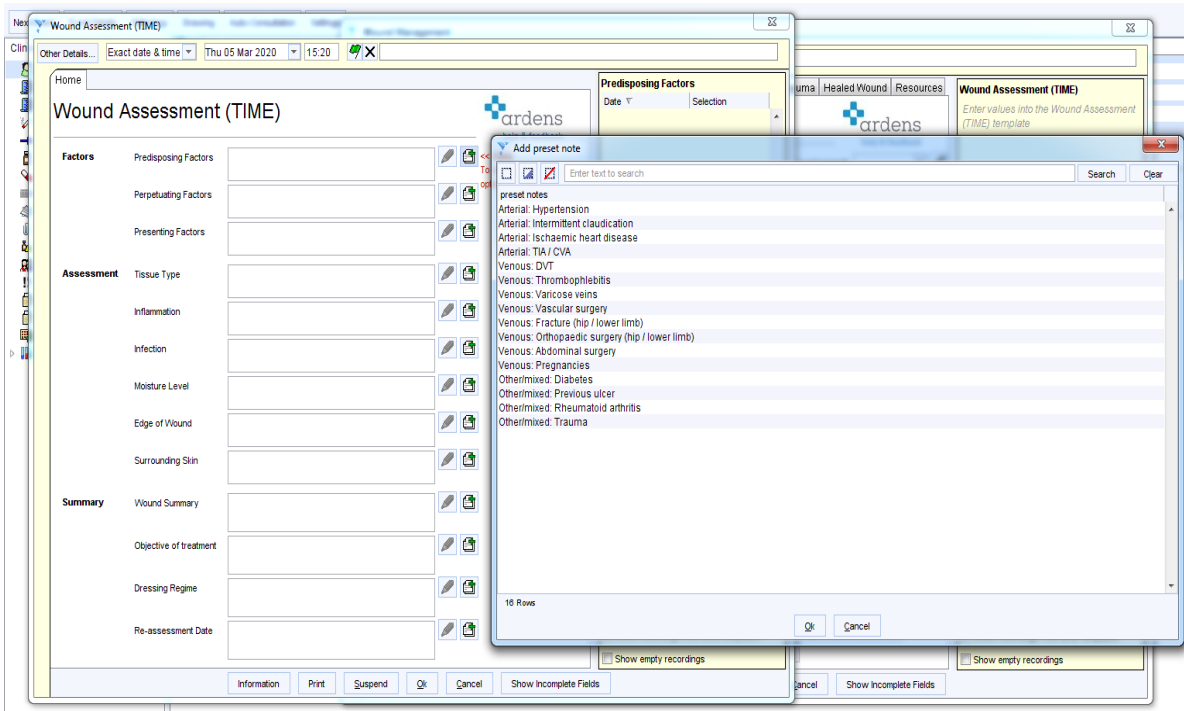

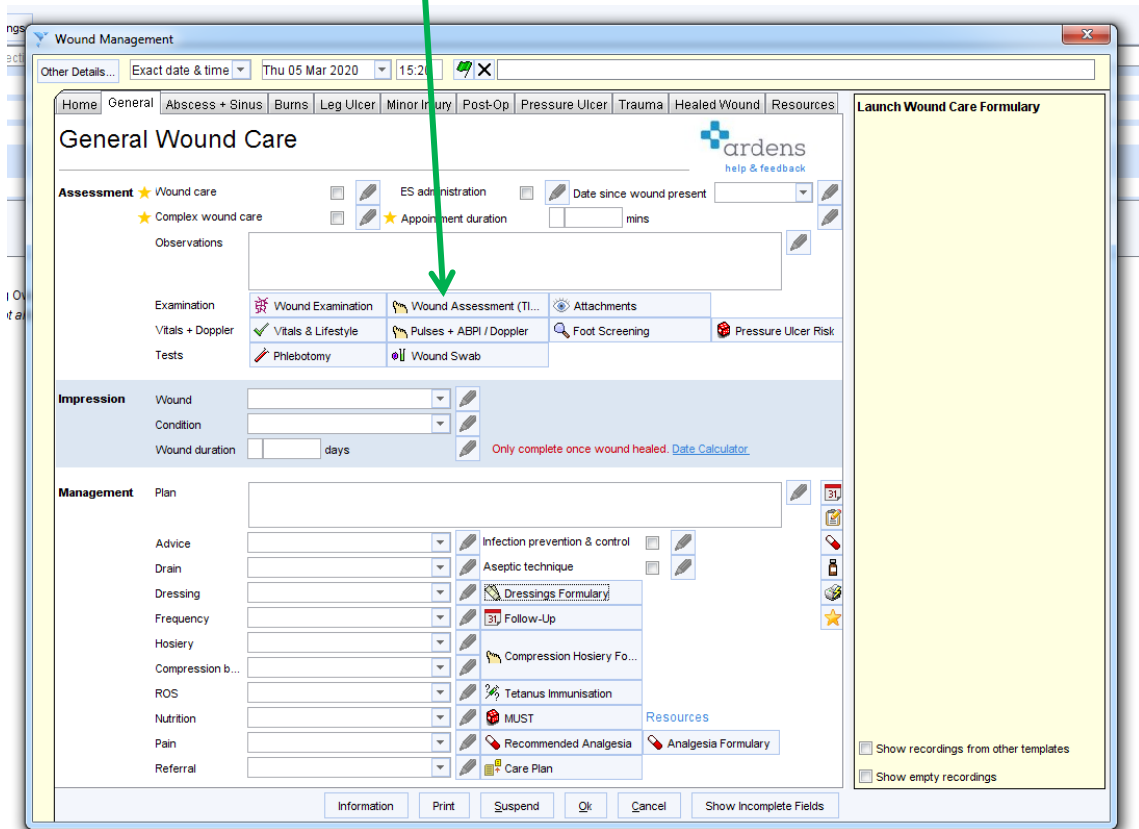

- From the general wound management template you can launch other templates such as the wound examination template where you can describe the specifics of up to four wounds

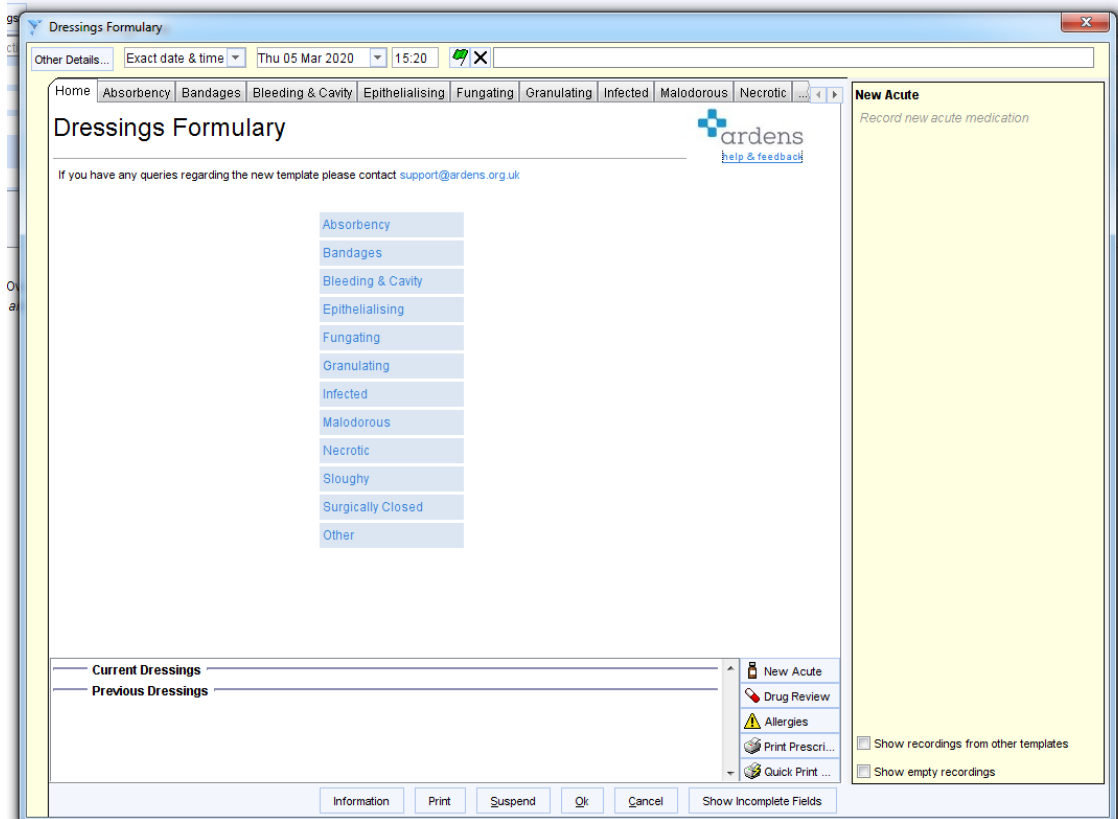

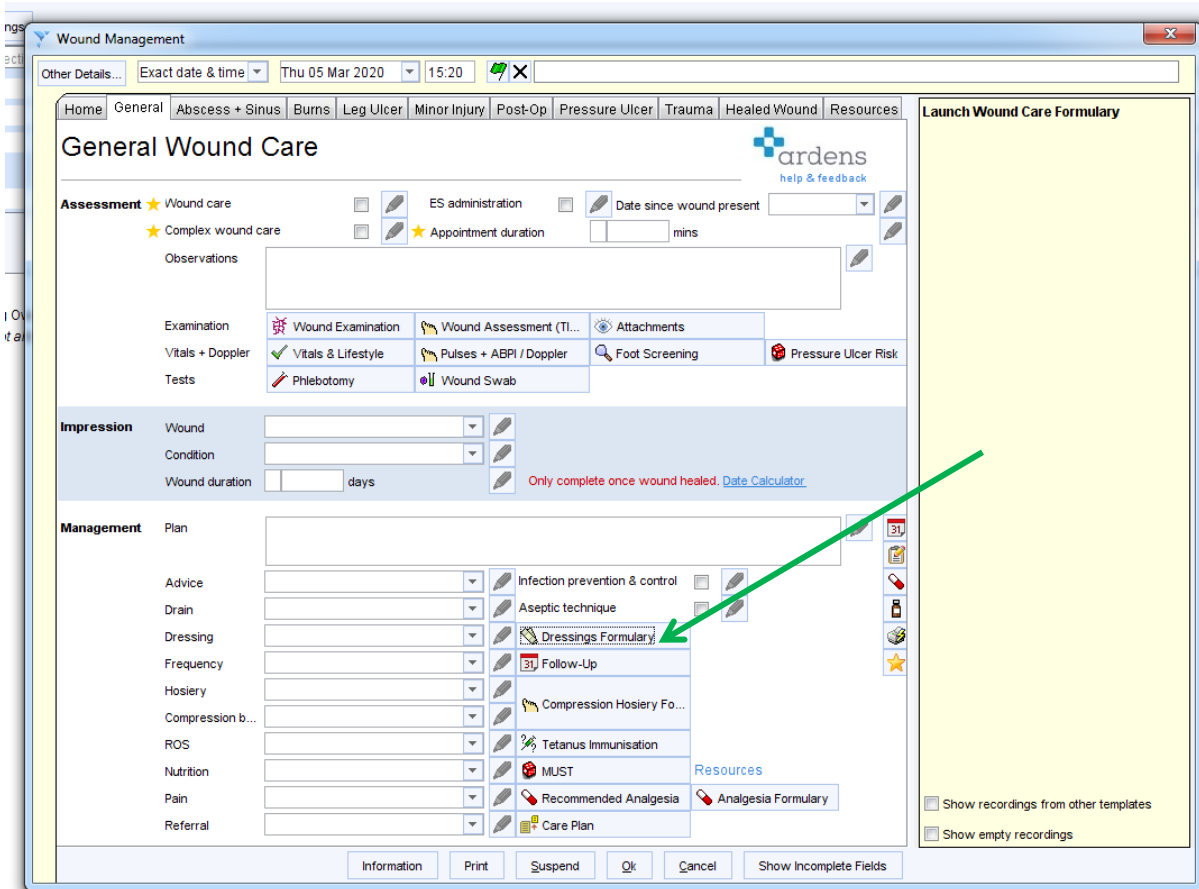

- You can access the swab request template from here which will self-populate for you.

- You can use the wound assessment template where there are pre-populated descriptions you can choose to use or free type your own descriptions.

- You can also access the dressings formulary

5. There is a leg ulcer care template with the same links as above and a link to the leg ulcers formulary
